

Nested If Statement

We can have if-elif-else block inside another if-elif-else block.

The above is called nesting in programming.

- 1] Any number of these statement can be nested inside one another.
- 2] Indentation is the only way to figure out level of nesting.

Syntax:-

```
if (expression):
```

```
    if (expression):
```

```
        s1
```

```
    s2
```

```
elif (expression):
```

```
    if (expression):
```

```
        s1
```

```
else :
```

```
    if (expression):
```

```
        s1
```

```
    s2
```
