

# \*args and \*\*kwargs in python

They are variable length arguments.

\*args

variable length non-Kw  
args

treated as a tuple

\*\*kwargs

variable length Keyword  
args

treated as a dict.

Correct order in function definition.

1. Positional parameters
2. \*args (if-any)
3. Keyword -only param
4. \*\*kwargs (if-any)
